Psychiatric Advanced Practice Nursing

Covering all advanced practice competencies and roles, this book offers strategies for enhancing patient care and legitimizing your role within today's health care system. It covers the history of advanced practice nursing, the theory behind the practice, and emerging issues. Offering a comprehensive exploration of advanced practice nursing, this edition also adds a focus on topics including the APN scope of practice, certification, and the ethical and legal issues that occur in clinical practice. Advanced practice competencies are discussed in relation to all advanced practice nursing and blended CNS-APN roles (case manager, acute care nurse practitioner), highlighting the shared aims and distinctions of each role. In-depth discussions on educational strategies and research competencies develop an understanding of how to use evidence-based research in practice, and how to promote these research competencies to other APNs. A conceptual framework shows the clear relationships, roles, and challenges between the competencies, nursing roles, and the competencies of the national and international health care systems. Advanced practice competencies are compared to other APNs in a comprehensive way to clarify and justify equitable reimbursement for APN services, also enhancing your skills in quality improvement strategies, informatics, and systems thinking. Information on telehealth considerations covers the new sources of electronic healthcare information available to patients and describes how to counsel them on using reliable resources.

Psychiatric Nursing

"Dr. Wheeler has skilfully crafted a text that covers basic psychiatric principles and skills from developing a therapeutic relationship and assessing and diagnosing the client to providing evidence-based psychotherapy for a variety of patient populations. This text is an excellent primer for teaching therapy skills and, although targeting graduate psychiatric nursing students, would prove equally valuable for students of any mental health discipline. It is also a resource for experienced clinicians wanting to expand their understanding of trauma and how adaptive information processing might be used as an organizing framework for all psychotherapy." -- Linda Bailey, Journal of EMDR Practice and Research DESCRIPTION This is a how-to compendium of evidence-based approaches to practicing psychotherapy for both the experienced and novice advanced practice psychiatric nurse. This book integrates neuroscience with relationship science and unifies disparate psychotherapeutic approaches. With contributions from leaders in the field, this book provides a framework and straightforward, yet sufficiently comprehensive to provide a framework for understanding and treating patients across the life span. The most useful theoretical models are highlighted with principles, and techniques of treatment for nurse psychotherapists and those with prescriptive authority. This second edition updates the award-winning first edition, providing updated guidelines, new chapters, and case studies to assist APNs in deciding which treatment to use based on psychotherapy outcome studies and practice guidelines. New chapters in the Second Edition: Motivational Interviewing Diathermic Behavior Therapy Group Therapy Family Therapy Eye Movement Desensitization and Reprocessing (EMDR) Therapeutic Approaches for Addictions New COP Awards & Reimbursement Awards and Revisions for the First Edition: APNA Media Award 2012 Book of the Year Award 5 Star Amazon Reviews 4 Star Good Books "Lays out a holistic paradigm for advanced psychiatric nursing (APN) practice by drawing upon a neuroscience of information processing, human development, attachment theory, and trauma. ... (and) explains the essentials of psychotherapy by melding principles underlying the therapeutic alliance, adaptive information processing (AIP), and a hierarchically arranged treatment format that fosters healing through the resolution of dysfunctional memory. This important text tells true to the historical basis for psychiatric nursing being organized around phases and principles of the nurse and therapeutic alliance. The surface to "depth" approach in Psychiatric Care Wheeler offers the field a scholarly training manual, grounded in Shapiro's (2001) adaptive information processing paradigm, whereby the brain is viewed as an information processing system with innate self-healing mechanisms that regulate its internal environment to survive and maintain a stable, condition constant through dynamic regulation." Advanced Practice Psychiatric Nursing

Fully updated and revised, the second edition of Integrative Nursing is a complete roadmap to integrative patient care, providing a guide to whole person/whole systems assessment and clinical interventions for individuals, families, and communities. Treatment strategies described in this text are designed to optimize the full complement of evidence-informed methodologies available to a trained, person-centered approach to care. This text explores concepts, skills, and theoretical frameworks that can be used by healthcare providers in creating and sustaining comprehensive care plans. This volume provides an integrative approach to transformative medicine, the most effective ways to optimize wellness; principles of symptom management for many common disorders like sleep, anxiety, pain, and cognitive impairment; the application of integrative nursing techniques in a variety of clinical settings and among a diverse patient population; and integrative practice around the world and how it impacts patients’ health. The academic rigor of the text is balanced with practical and relevant content that can be readily implemented into practice for both established practitioners as well as students entering in undergraduate and graduate programs. Integrative nursing practice is the ability to take account of the whole person (body, mind, and spirit) as well as all aspects of lifestyle; it emphasizes the therapeutic relationship and makes use of appropriate therapies, both conventional and alternative. Series editor Andrew Weil, MD, is Professor and Director of the Arizona Center for Integrative Medicine at the University of Arizona. Dr. Ferrell’s program was the first such academic program in the U.S., and its stated goal is “to combine the best ideas and practices of conventional and alternative medicine into cost effective treatments without embracing alternative practices uncritically.”

Advanced Practice Psychiatric Nursing

This groundbreaking core text fills a void in nursing literature by integrating psychotherapy, psychopharmacology, and complementary and alternative medicine (CAM) approaches into advanced practice nursing.

Psychotherapy for the Advanced Practice Psychiatric Nurse

The Oxford Textbook of Palliative Nursing remains the most comprehensive treatise on the art and science of palliative care nursing available. Dr. Betty Rolling Ferrell and Dr. Judith A. Paice have invited 162 nursing experts to contribute 186 chapters describing the physical, psychological, social, and spiritual needs pertinent to the successful palliative care patient. Organized within 7 Sections, this new edition covers the gamut of principles of care from the time of initial diagnosis of a serious illness to the end of a patient’s life and beyond. This fifth edition features several new chapters, including chapters on advance care planning, organ donation, self-care, global palliative care, and the ethos of palliative nursing. Each chapter is rich with tables and figures, case examples for improved learning, and a strong evidence-based practice to support the highest quality of care. The book offers a valuable and practical resource for students and clinicians across all settings of care. The content is relevant for specialty hospice agencies and palliative care programs, as well as generalist knowledge for schools of nursing, oncology, critical care, and pediatric. Developed with the intention of emphasizing the need to extend palliative care beyond the specialty to all settings and by all clinicians caring for seriously ill, this new edition will continue to serve as the cornerstone of palliative care education.

"Psychiatric Mental Health Nursing emphasizes interpersonal relationships as the foundation for nursing practice and the cornerstone for relationship-based care. Starting out with an important historical overview of the profession, the student is introduced to the rich history of psychiatric mental health nursing. This text then guides the nursing student through the essential phases of self-discovery while integrating interpersonal nursing theory concepts into practice with various populations."

Psychotherapy for the Advanced Practice Psychiatric Nurse, Third Edition

This text reinvigorates the emphasis on the therapeutic relationship that is the core of nursing practice. It also relies on our strong history as therapists and introduces a need for integration of all aspects of care, a true holistic approach that characterizes the nursing perspective. This book should serve as a review for nurses who are studying for certification exams and is very useful for coursework in DNP programs as well as the masters programs in psychiatric mental health nursing.

Grayce M. Sills, PhD, RN, FAAN Professor Emerita, Ohio State University From the Foreward Now in its second edition, this groundbreaking text and reference continues to be the only resource for APRNs to focus on integrative interventions for individuals with mental health problems across the lifespan. Combining theory and practice, it provides a clear framework for integrating psychopharmacology, psychotherapy, and Complementary and Alternative Medicine (CAM) into advanced practice nursing. The second edition is thoroughly updated to reflect current research, new classifications in DSM-5, genetic testing, and increased use of telemental health delivery. It builds upon its lifespan focus and updates quick-access psychiatric policy principles. Additionally, the book incorporates the 2014 publication of the ANA Scope and Standards of Practice for Psychiatric Nurses, offers a new focus on QSEN requirements, and responds to the need to reduce health disparities and address cultural considerations. Organized around psychiatric syndromes, the book covers neurobiology, theory, and research evidence related to psychopharmacology, psychotherapy, and CAM interventions. It provides a virtual buffet of clear treatment options in the form of well-designed decision trees and accompanying explanatory narrative.

This text also includes a section on such specialized considerations as substance misuse, medical problems, pregnancy, and forensic issues that often co-occur with psychiatric syndromes. Concise, clear language and abundant charts, graphs, and algorithms enhance the book. An added value in supporting sound clinical reasoning.

New to the Second Edition: Thoroughly updated, evidence-based content. Encourages new research Presents three completely new chapters in Integrative Management of Impulse Control, Telehealth, and Quality Improvement and Evidence-Based Practice. Advanced Practice Psychiatric Nursing, Second Edition

"[A] unique addition to the sparse literature on learning to become a nurse psychotherapist. Focuses not only on psychotherapeutic techniques, but also the work a nurse must be willing to do to become a skilled and helpful therapist. A valuable resource for both psychiatric nursing graduate students and the practicing nurse psychotherapist." -Angela J. Chesser, PhD, RN, APMN, CNS "Human beings are hot-wired biologically for relationship-building, and as such, it is the nurse-patient relationship that becomes central to healing. This much-needed book gives voice to the very real perils of abandoning patients to pills. It is a clarion call to return to our roots and our strengths." -Patrice Hanceur, MS, RN Fast Facts for the Nurse Psychotherapist is the first book to guide the novice and experienced psychiatric APRN on the process of truly becoming a psychotherapist. It is grounded in the concept of self-reflection as a foundation for successful psychosocial treatment and addresses a variety of strategies and styles that foster positive outcomes; the use of dreams and other conscious/unconscious techniques; the clinical supervision process; and how to continually grow as an individual and therapist. This resource includes a variety of tools to promote self-reflection and provides practical considerations for the work environment, billing and other administrative responsibilities, and political concerns. Abundant case examples allow the reader to "see" the care process in action. The book also includes the history of the psychiatric nurse as therapist and the seminal work of Hildegard Peplau. Written in an approachable and conversational style, this unique resource will prepare nurse psychotherapists to become truly ready to help their clients to the fullest. Key Features: Highlights the importance of self-reflection and delivers helpful tools to promote it Provides strategies and styles for effective therapeutic practice Allows the reader to "sit in" on therapy sessions with vivid case examples Provides a foundation for individual and personal growth written in an approachable, conversational style

Integrative Nursing

Background and Purpose: The burden of depression, from an economic and individual perspective, has significant implications for our society. Currently two thirds of those diagnosed with depression receive treatment in primary care settings. Previous treatment models for depression have considered onsite medical mental health clinicians, however, numerous studies demonstrate the role of an advanced practice psychiatric nurse (APRN) in primary care settings. The purpose of this project was to examine and compare differences in patient satisfaction and level of depression in patients with major depression managed by primary care clinicians with those managed by an advanced practice nurse in the primary care setting. Methods: This study is a prospective cohort design that took place at El Pueblo Health Services, a Federally Qualified Health Center that is a look-alike in Bernalillo, New Mexico. Twenty-four adults who self-reported with symptoms of major depressive disorder participated in an intervention that consisted of a psychosocial intake followed by a psychiatric evaluation and administration of the Beck Depression Inventory-II (BDI-II) and Client Satisfaction Questionnaire-8 (CSQ-8). The intervention included pharmacologic and nonpharmacologic treatment over a 3-month period for a minimum of four, or twice monthly, sessions for up to 3 months. A comparison group of 14 adults with major depression participated in care as usual with their primary care providers. Patients in both groups were administered the BDI-II and CSQ-8 at baseline and 3 months. Evaluation: Differences in the mean scores on the BDI-II and CSQ-8 between pre- and post-test in the intervention group were statistically significant compared with the comparison group that only demonstrated statistical significance on the CSQ-8 scores. In addition, preintervention and postintervention change scores on the BDI-II were statistically significant. However, there was a lack of statistical significance in the change scores on the CSQ-8. Clinical Implications and Recommendations: Results from this project highlight the effectiveness of an intervention consisting of pharmacologic and nonpharmacologic services provided by a psychiatric nurse practitioner in a sample of adults with major depression in a primary care setting.
